

# Why Choose our LAX - CHI Console Box Service?

**Speedy Delivery.** Compared existing Direct (rail) console service, this new LAX-CHI Console service is not affected by the recent rail congestion and delays. The 53' trailer allows for shorter lead times to Chicago than rail transportation.

**Smooth Handling.** Normally, when using another company's co-loader, the cargo is drayed to a designated shared CFS w/h, resulting in delays in prepping for delivery. Using our consolidation service, the container will be handled within a dedicated warehouse, thus removing impact incurred by the other company's cargo, resulting in quick handling & action for the delivery.

**Quality Checked.** Photographs are taken both at the time the container is loaded in Japan and again when the container is opened after arrival in Los Angeles, allowing for any damage that may occurred to be quickly identified with backup support (reinforcement, repacking) readily available.

**NEW Service**

Direct Los Angeles-Chicago consolidation is now available. This NEW service will provide smooth transportation to our customers in the West Coast regions, further support stable and speedy transportation to the Midwestern region by using Trailer instead of Rails.

Take Control of your Cargo from Start to Finish.

**Transit Time**
